### Medical Equipment Installer to Establish new Allen County Operations

---

**CHURUBUSCO, Ind.** (Nov. 19, 2009) - Maxim Medical Services Inc., a medical equipment installation and repair firm, announced today that it will expand its operations here, creating 51 new jobs by 2012.

The company, which installs services and resells surgical lighting and imaging equipment, will invest more than \$1.6 million to expand its distribution operations and establish a light manufacturing center in an existing 50,000 square-foot facility in Churubusco, 16 miles northwest of Fort Wayne. The larger facility will enable Maxim Medical Services to realize its projected annual revenue of \$20 million by fourth quarter 2012.

"Maxim is experiencing incredible growth and we're happy they have chosen to expand in northeast Indiana," said Governor Mitch Daniels. "It's always nice to announce new jobs, but it takes on special importance when jobs are created in a small community like Churubusco."

Maxim, which currently employs nearly 20 associates in LaOtto, Ind., plans to begin hiring additional manufacturing and repair associates in the first quarter of 2010 after moving into the new facility.

"We chose Indiana as the center for our business because of its proximity to a sizeable percentage of the general population, and therefore potential customers. Because we are a service-oriented business, we need to be able to get to our customers quickly," said Phil Cowart, owner and vice president of Maxim Medical Services. "To have the opportunity to expand our operation, especially in economic times such as these, is a chance that we can't pass up. The acquisition of the property in Churubusco will be invaluable in facilitating the growth that our company has been striving for since its inception."

Established in 2003, Maxim Medical Services originated as an installer and repairer of surgical technology systems. The company has grown to include an equipment refurbishing and resell operation and anticipates bringing additional manufacturing and powder coating operations in-house by the end of 2010.
